Alzheimer’s Los Angeles
Dementia Care Specialist Training
Effectively Working with Patients and Families to Improve Care
This training program is supported, in part, by grant numbers 90DS2002-01-00 and 90DS2017-01-00, from the Administration on Aging, U.S. Administration for Community Living, Department of Health and Human Services, Washington, D.C. 20201; the California Department of Aging; The Allergan Foundation; and The Rosalinde and Arthur Gilbert Foundation. Grantees undertaking projects under government or foundation sponsorship are encouraged to express freely their findings and conclusions. Points of view or opinions do not, therefore, necessarily represent official Administration for Community Living, California Department of Aging, or other funders’ policies.
Learning Objectives

At the conclusion of this training, you will:

• Describe hallmark symptoms of Alzheimer’s disease and related dementias (ADRD)
• Demonstrate correct use of a cognitive screening tool
• Summarize the components of the IDEA! behavior management strategy
• Describe the importance of identifying, assessing, and supporting family caregivers
• Demonstrate ability to develop care plans for people with ADRD and/or their caregivers
• Describe the importance of making appropriate referrals to home- and community-based services (HCBS)
What are We Tackling Today?

• Dementia-Capable Healthcare
• Fundamentals of Cognitive Impairment, Dementia, and Alzheimer’s Disease
  • Potential Warning Signs
  • Defining Dementias and Alzheimer’s Disease
  • Disease Progression
  • Risk Factors
• Screening/Detection and Diagnosis
  • AD8 Screening Tool
• Alzheimer’s Clinical Care Guideline
Dementia-Capable Healthcare
Why do you want to be a Dementia Care Specialist?
Criteria for Moving a Member to a Dementia Care Specialist

• The member does not have a caregiver
• The member is unable to follow a care manager’s recommendations
• The member’s caregiver has knowledge deficits about Alzheimer’s disease and related dementias
• The member has behavioral or mood disturbances
Criteria for Moving a Member to a Dementia Care Specialist

- Difficulty managing chronic medical conditions that are complicated by Alzheimer’s
- Difficulty managing medication regimen
Criteria for Moving a Member to a Dementia Care Specialist

• Difficulty completing ADLs
• Healthcare utilization concerns (i.e. multiple ER visits in the last year or difficulty attending appointments)
What makes a healthcare system “dementia-capable”?
Video: Building Systems of Healthcare for People with Dementia

https://www.youtube.com/watch?v=fdQ4Tv5L7Gc

Running time: 1 minute 49 seconds
Dementia-Capable Systems of Care

(1) Timely detection of dementia

- Assessments include trigger questions for cognitive impairment
- Adoption of a validated cognitive screening tool
- Integration of results into electronic health record (EHR)
- Protocol for diagnosis if screen is positive
- Documentation of diagnosis
Dementia-Capable Systems of Care

(2) Person- and family-centered care plans

- Identification of family caregiver
- Documentation of caregiver in EHR
- Adoption of validated caregiver assessment tool
- Integration of caregiver education
- Adoption of best practice care plans
- Respite provided to caregivers
Dementia-Capable Systems of Care

(3) Seamless access to dementia-specific community-based services

- Provision of services and supports to patients and caregivers
- Adoption of direct referral program (*ALZ Direct Connect*) to connect families to education and support services
PART I
Fundamentals of Cognitive Impairment, Dementia, and Alzheimer’s Disease
Video: Alzheimer’s and Dementia Statistics 2018 ALZLA

https://www.youtube.com/watch?v=ok0iJC5m4
Running time: 1 minute 36 seconds
Alzheimer’s Disease in the United States

- 5.7 million people have Alzheimer’s
- 1 in 10 people age 65 and older have Alzheimer’s
- 1 in 3 people age 85 and older have Alzheimer’s
- 6th leading cause of death
- A new case every 65 seconds
- 16.1 million unpaid caregivers

Alzheimer’s Association. 2018 Alzheimer’s Disease Facts and Figures. Alzheimer’s & Dementia, 2018;14(3)367-429
Implications for Health Care

- Average per-person Medicare spending for those with ADRD is three times higher than for those without these conditions.

- The average per-person Medicaid spending for seniors with ADRD is 23 times higher than average per-person Medicaid spending for all other seniors.

Age-Related Memory Loss & Potential Warning Signs
NEVER FORGETS

SOMETIMES FORGETS

ALWAYS FORGETS
Why Recognize Warning Signs?

Why is it important that care managers and others on the team members recognize potential warning signs of cognitive impairment?
Normal Aging

- Slower thinking, but intelligence remains stable
- Some difficulties finding the right word
- Mild decrease in short-term memory
- Changes in senses
- Difficulty paying attention
- Slower processing
Normal Aging

Alzheimer’s is not a normal part of aging. Typical age-related changes can include:

- Missing a monthly payment
- Losing things from time to time
- Sometimes forgetting a word
- Making a bad decision once in a while
- Forgetting the day and remembering it later
Early Signs of Alzheimer’s Disease

1. Feeling less able to do day to day activities
2. Difficulty or trouble managing finances and paying bills
3. Misplacing or losing things more often
4. Increasing anger, anxiety, or sadness
5. Trouble with reading, writing, and conversations
Early Signs of Alzheimer’s Disease

6. Repeating questions or stories
7. Withdrawing from family, friends, or social activities
8. Getting lost on familiar roads or paths
9. Needing more reminders to stay organized
10. Hearing that others have concerns about changes in memory or behavior
### Activity: Normal Aging vs. Possible Warning Sign of Alzheimer’s Disease

**Directions:** Read the “normal aging” statements below and then re-write them to reflect a possible warning sign of Alzheimer’s disease.

<table>
<thead>
<tr>
<th>Normal Aging</th>
<th>Possible Warning Sign of Alzheimer’s Disease</th>
</tr>
</thead>
<tbody>
<tr>
<td>Making a bad decision once in a while</td>
<td></td>
</tr>
<tr>
<td>Missing a monthly payment</td>
<td></td>
</tr>
<tr>
<td>Forgetting which day, it is and remembering it later</td>
<td></td>
</tr>
<tr>
<td>Sometimes forgetting which word to use</td>
<td></td>

Alzheimer's
Los Angeles
Dementia / Major Neurocognitive Disorder

- Vascular dementia
- Dementia with Lewy bodies
- Frontotemporal dementia
- Mixed dementia
- Reversible dementias

Alzheimer's disease
Major Neurocognitive Disorder DSM-5

• Previously known as dementia
• Significant cognitive decline from a previous level of performance in one or more cognitive domains
• Cognitive deficits interfere with independence in everyday activities

DSM-5 Definition
What is Vascular Dementia?

• Interrupted blood flow to the brain; often caused by stroke
• Changes in thinking can occur suddenly or worsen gradually
• Common early signs include:
  • Trouble with planning and judgment
  • Uncontrollable laughing or crying
  • Difficulty with attention
  • Difficulty with speech
• Other symptoms can vary widely, including disorientation and loss of vision

Vascular Dementia

Educate families:

• Doing things that can prevent stroke may be helpful in reducing further vascular damage

• Exercise, healthy eating, not smoking, regular check ups with doctor

• Importance of accessing medical care for co-existing conditions (diabetes, high BP)
What is Frontotemporal Dementia?

- Begins at a younger age
- Progresses more rapidly than Alzheimer’s disease
- First symptoms are usually personality changes and disorientation
When John was about 61 years old, his partner, David, started noticing some distinct and concerning changes in John’s personality and behavior. John would not change his clothes unless David put out clean clothes for him to wear. John was using excessive profanity, saying racial slurs, and was socially disinhibited. John would urinate in the presence of his family. This embarrassed David. David felt that John was doing all of this intentionally.
Frontotemporal Dementia

Educate families:

- Disease often manifests behaviorally
- Behaviors are not intentional
- Families may have misconception that the way a person acts or things he/she says are a reflection of how the person always felt
What is Dementia with Lewy Bodies?

• Wide variations in attention and alertness
• May include:
  • Hallucinations
  • Tremors
  • Rigidity
• Potential for adverse reaction to antipsychotic medications
Angie is 78 years old. She has a history of falls and has trouble with her gait. She has fluctuations in alertness, activity level, mood, and speech. Angie is sometimes very oriented and sometimes lacks attention and alertness. Angie has visual hallucinations that include someone signing, dancing, and talking to her.
Dementia with Lewy Bodies

Educate families:

- Antipsychotic medications should be avoided due to adverse reactions
- Memory problems may not be noticeable in early stages; visual hallucinations more common
What is Mixed Dementia?

• Alzheimer’s disease and another type of dementia can co-exist
• Researchers think this occurs with almost 50% of people who have Alzheimer’s disease
Potentially Reversible Causes of Dementia

- Depression, delirium
- Emotional disorders
- Metabolic disorders (i.e. hypothyroidism)
- Eye and ear impairments
- Nutritional (i.e. B12 deficiency)
- Tumors
- Infections
- Alcohol, drugs, medical interactions
Alzheimer’s Disease
Did You Know?

Not everyone with dementia has Alzheimer’s disease

**BUT**

All people diagnosed with Alzheimer’s disease have a form of dementia
## Activity: Through the Eyes, Head, and Heart of a Person with Alzheimer’s

<table>
<thead>
<tr>
<th>4 favorite memories</th>
<th>3 most important people in your life</th>
</tr>
</thead>
<tbody>
<tr>
<td>2 things you love to do</td>
<td>1 hope for your future</td>
</tr>
</tbody>
</table>
What is Alzheimer’s Disease?

Most common form of dementia
Neurocognitive disorder
Must be diagnosed by physician
Onset is gradual
Progressive
Symptoms: memory impairment, problems with thinking and planning, and behaviors which interfere with daily life
Leads to death
Alzheimer’s Disease

**Educate families:**

- Beyond memory
- Gradual progression; no cure
- Sudden and unusual changes can be sign of acute condition
- People experience disease differently, but problem-solving strategies can be useful to all
Healthy Brain vs. Brain with Alzheimer’s

Director of the Alabama Bureau of Geriatric Psychiatry, alzbrain.org
Healthy Brain

Brain with Alzheimer’s
Video: What is Alzheimer’s Disease?

https://www.youtube.com/watch?v=7_kO6c2NfmE&t=61s
Running time: 3 minutes 14 seconds
Myth vs. Fact

It is important that members have correct information about Alzheimer’s.

Explain to the member if his/her statement is a myth or fact.

Explain why.

Be concise, accurate, & culturally sensitive
### MYTH vs. FACT

**Directions:** Read each statement below. Mark off if it is a myth or fact. Then, write a concise, accurate, and empathetic explanation that could be shared with a member and his/her family.

<table>
<thead>
<tr>
<th>MEMBER OR FAMILY Says...</th>
<th>MYTH</th>
<th>FACT</th>
<th>DEMENTIA CARE SPECIALIST EXPLANATION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Everyone with Alzheimer’s has dementia.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>My husband makes racist comments; this must be how he always felt about other races.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>To meet criteria for major neurocognitive disorder, a person’s cognitive deficits must interfere with everyday activities.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Alzheimer’s disease only affects memory.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>My wife has vascular dementia. There is nothing we can do about it.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Some dementias can be reversible.</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
Disease Progression
Alzheimer’s Disease Progression

- Mild Cognitive Impairment
  - Pre-clinical/presymptomatic stage
- From 4-20 years, 8 years average
- Early stage
- Middle stage
- Late stage
- Death (pneumonia and/or co-morbidities)

Slide courtesy of Cordula Dick-Muehlke, PhD
Domains Affected by Alzheimer’s

- Memory loss
- Disorientation
- Executive function/complex tasks
- Visual and spatial problems
- Language problems
- Behavioral expressions
- Functional limitations
Early Stage Alzheimer’s Disease

- Insight into disease
- Many losses being experienced
- Depression
- Ability to make decisions/plan ahead
Early Stage Alzheimer’s Disease

- Problems with memory and concentration
- Trouble finding the “right word” and/or remembering names
- Misplacing things
- Trouble organizing & planning (getting lost)
Video: The Unspoken Impact of Dementia

https://www.youtube.com/watch?v=z15-0xZTng4
Alzheimer’s Australia, 2014
Running time: 4 minutes 2 seconds
Middle Stage Alzheimer’s Disease

• Memory & thinking problems more obvious
• Difficulty with communication
• Nonverbal communication retained
• Behavioral symptoms
• Greater assistance needed with day-to-day activities
• More caregiver involvement
Middle Stage Alzheimer’s Disease

- Retention of social skills
  - Reports that everything is “fine”
  - Reports ability to bathe, cook, take medications, etc.
- Retention of nonverbal communication
- Appears to be healthy to outsiders and to medical professionals
Video: HBO Documentary: The Alzheimer’s Project

https://www.hbo.com/documentaries/the-alzheimers-project-caregivers

Running Time: 3 minutes

*Note: The video clip was manually extracted*
Late Stage Alzheimer’s Disease

• Functional decline
• Assistance needed with day-to-day activities & personal care
• Brain hears, but unable to communicate with body what to do
• Unable to have a conversation
• Loss of bladder/bowel control
• Trouble swallowing
Trish is unable to recognize family members and often calls for her mom who is deceased. Trish’s speech is fragmented; it’s often difficult to understand her. Trish is confined to a chair or her bed. She needs help with eating and toileting. Chewing and swallowing are challenging. Trish regularly dozes during the day. She is often asleep.
Disease Continuum

Instructions

• You will receive a card that has a description on it
• Find the stage of Alzheimer’s that best corresponds to the description
• Everyone will line up in the order that best represents the progression of the disease
• Feel free to talk to your colleagues and discuss
• In some cases, there is no “right” or “wrong” answer
Risk Factors
“Something’s just not right—our air is clean, our water is pure, we all get plenty of exercise, everything we eat is organic and free-range, and yet nobody lives past thirty.”
Major Risk Factors for Alzheimer’s Disease

- Age
- Family history
- Genetics
- Head injury
- Heart-brain connection
- General healthy aging
Heart-Brain Connection

• Evidence links brain health to heart health
• Factors that increase risk of cardiovascular disease are associated with higher risk of developing ADRD
  • Smoking
  • Obesity
  • Diabetes
  • High cholesterol
  • Hypertension

Alzheimer’s Association, 2014 Alzheimer’s Disease Facts and Figures, Alzheimer’s & Dementia, Volume 10, Issue 2
Screening and Diagnosis
Why Get a Diagnosis?

There is no cure for Alzheimer’s disease so why get a diagnosis?
Importance of Diagnosis

- Ability to plan ahead
- Preferences for care/medical decisions
- Legal/financial planning
- Living options/long-term care
Importance of Diagnosis

- Optimize disease management
- Management of co-existing conditions
- Care coordination and care planning
- Drug and non-drug treatments
- Medication review
- Safety
- Anticipate issues/head off crises
- Participation in clinical studies
Importance of Diagnosis

• Support for person with disease and family
• Linking to home and community-based organizations (faith-based organizations)
• Education, support services, and programs
Trinity had some concerns about her cognition, but thought they were just signs of aging. By the time Trinity was diagnosed with dementia, the disease was rather progressed. Her children had different ideas about the best course of care for her. Some of her children thought she should remain at home with a caregiver and others wanted to place her in a nursing home. The siblings had bitter arguments about how to care for mom.
Cultural/Ethnic Barriers

Compared to whites, ethnic minorities are less likely to get a diagnosis, and when they do, it is often in the later stages of the disease.

Why?

Diverse Communities’ Views of Dementia

- Normal aging (not a disease process)
- Cognitive issues may be expected and dismissed as normal
- Associated with mental illness, craziness, madness
Stigma

- Stigma
- Shame
- Humiliation
- Diagnosis may be seen as shaming family for doing something wrong/causing disease
- Poor reflection on family and family lineage
Omar is Pakistani. He is showing early signs of dementia. His family speaks English and Urdu. Dementia is directly translated into Urdu as “insanity” or of “unsound-mind.”

How might this meaning affect Omar’s family and feelings of shame or stigma?
Use of Formal Healthcare Services

- Unaware of available services
- Do not know how to gain access to services
Use of Formal Healthcare Services

- Distrust in care providers
- Lack of professionals with cultural and linguistic expertise & sensitivity
- Linguistic barriers
- Limited information at appropriate literacy level
Detection

- Complaints/family observations
- Screening (AD8)
- Annual Wellness Visit
- Health Risk Assessment

Diagnosis

Disease management/care planning
ALZHEIMER’S ASSOCIATION®
Medicare Annual Wellness Visit Algorithm for Assessment of Cognition

A. Review HRA, clinician observation, self-reported concerns, responses to queries
   YES
   Signs/symptoms present
   NO
   Informant available to confirm

B. Conduct brief structured assessment
   YES
   Patient Assessment: Mini-Cog or GPCOG or MIS
   Informant assessment of patient: Short ICODE, AD8 or GPCOG
   NO
   Brief assessment(s) triggers concerns: Patient: Mini-Cog ≤3 or GPCOG ≤5 (5-8 score is indeterminate without informant) or MIS≤4 or Informant: Short ICODE ≥ 3.38 or AD8 ≥ 2 or GPCOG informant score ≤3 with patient score <8
   NO
   Follow-up during subsequent AWV

C. Refer OR Conduct full Dementia Evaluation
"Off hand, I'd say you're suffering from an arrow through your head, but just to play it safe, I'm ordering a bunch of tests."
Taking Complaints Seriously

- Member and/or family presents “complaints” about memory loss or cognitive impairment
- Cognitive screen administered
- Results to PCP or specialist for diagnostic workup
Cognitive Screening Tools

- Several validated screening tools
- Involve member and family ("informant")
- Counseling before and after screen
- Screening tools do not diagnose dementia; they may indicate a need for further assessment
### AD8 Dementia Screening Interview

**Patient ID#:**

**CS ID#:**

**Date:**

<table>
<thead>
<tr>
<th>Remember, “Yes, a change” indicates that there has been a change in the last several years caused by cognitive (thinking and memory) problems.</th>
<th>YES, A change</th>

**TOTAL AD8 SCORE**

---

Adapted from Gauthier JE et al, The AD8, a brief informant interview to detect dementia, Neurology 2005;65:559-564.

Copyright 2005. The AD8 is a copyrighted instrument of the Alzheimer's Disease Research Center, Washington University, St. Louis, Missouri. All Rights Reserved.
Detection: Using the AD8 Screening Tool

- Validated screening tool
- Use with patient or “informant”
- Introduce screening:
  “I am going to ask you some questions to help better plan for your care/your relative’s care.”
- Administer screening
Detection: Using the AD8 Screening Tool

- Read each statement aloud
- Add up the sum of the number of items marked “Yes, a change”
- Keep in mind that the AD8 does not diagnose dementia; it may indicate a need for further assessment
- Based on clinical findings, use the following cut points:
  - 0-1: Normal cognition
  - 2 or greater: Cognitive impairment is likely to be present
Using the AD8: Practical Tips

• In addition to AD8, ask patient and/or caregiver, “has a doctor or other healthcare professional ever said that you have or think the person has Alzheimer’s disease or some other form of dementia?”
• Make referral to primary care provider for diagnostic workup
Activity: Assessing for Cognitive Impairment Using the AD8

ASSESSING FOR COGNITIVE IMPAIRMENT: USING THE AD8

PART 1: Problem-Based Scenario

Your patient, Mr. Frank, a 76-year-old man, was recently discharged from the hospital after a respiratory infection. Mr. Frank is now back at home, where he lives with his partner of 32 years. Mr. Frank has a history of stroke and heart disease. Mr. Frank does not have a diagnosis of Alzheimer’s disease or a related dementia.

While speaking to Mr. Frank on the phone, you notice some possible warning signs of Alzheimer’s disease.

What were the warning signs that you noticed?

What questions might be appropriate for you to ask? To whom would you address your questions?
Process for Communicating AD8 with Provider

What process is in place to communicate the results of the AD8 to the primary care provider or to a specialist?
• PCP rules out reversible causes
• Referral for full diagnostic evaluation
• Document in medical record

Alzheimer’s Diagnosis

• Medical history
• Mental status evaluation
• Physical examination
• Neurological examination
• Laboratory tests
• Brain scans/images
• Psychiatric evaluation
• Interviews with family/caregiver
Why is it important that a diagnosis of Alzheimer’s disease or a related dementia is documented in the medical record and disclosed to the member and family?
Documentation

- Appropriate medical care
- Coordinated care
- Care planning
- Appropriate referrals to home and community-based services
Impact on Medical Care

Primary Care Providers

• Consideration to medical and non-medical interventions/treatments
• Better management of co-existing conditions
• Avoid treatments for wrong conditions
• Counsel about safety issues
• Appropriate care planning

Impact on Medical Care

Emergency Department

• Member may be poor historian
• Unnecessary tests ordered
• Non-optimal decisions about discharge
• Poor care transitions
• Importance of family

Impact on Medical Care

Hospital

- Delirium
- Fall risk
- Elopement
- Dehydration risk
- Inadequate food intake

- Resistance to care
- New incontinence
- Loss of functional abilities
- Importance of family

Impact on Medical Care

Specialists

• Avoid provision of treatments that may worsen cognition
• Multiple medications
• Lack of ability to monitor co-existing conditions
Detection

Diagnosis

Disease management/care planning

- Ongoing assessment
- Care plans
- Treatment
- Patient/family education/support
- Legal considerations
- Link to community resources

2017 Alzheimer's Clinical Care Guideline is a care plan roadmap.
PART II
Practical Dementia Care Management
What are We Tackling Today?

- Management of Alzheimer’s Disease and Related Dementias
  - Mandatory Reporting: Elder Abuse/Driving
  - Medication Management
  - Co-Existing Conditions
  - Safety
  - Behavioral Symptoms/IDEA!
What Makes Dementia Care Management Unique?

- Cognitive & functional limitations
- Lack of diagnosis
- Behavioral symptoms
- 24/7 Caregiving
- Caregiver integrated into care coordination & care plans
- Loss of insight & decision-making capacity

Dementia care management
Management of Alzheimer’s Disease and Related Dementias
Mandatory Reporting: Elder Abuse and Driving
Elder Abuse

- As many as 1 in 10 older adults, and 1 in 2 people with dementia, are victims of elder abuse.
- For every reported case of elder abuse, there are 23 that go unreported.
- 70-90% of perpetrators of elder abuse are family members, loved ones, or caregivers.
- Reporting helps link families to needed services.
- Victims of elder abuse are two times more likely to be hospitalized than other seniors.

Who are Mandated Reporters?

Any person who has assumed full or intermittent responsibility for the care or custody of an elder or dependent adult, whether or not he or she receives compensation.

Health practitioners are mandated reporters of elder abuse.

Welfare and Institutions Code Section 15630-15632
Welfare and Institutions Code Section 15630-15632

What Must Be Reported?

- Abandonment
- Isolation
- Neglect
- Physical abuse
- Financial abuse
- Self Neglect (deficits in physical self-care, medical care, health and safety hazards, and/or malnutrition)

Welfare and Institutions Code Section 15630-15632

Alzheimer’s Los Angeles
Raj and Ana have been married for over 40 years. Raj is Ana’s primary caregiver.

Ana’s dementia is very progressed. She is unable to follow simple instructions and is slow in completing tasks like dressing and eating.

Raj loves Ana very much, but often gets frustrated and is sometimes forceful with her. Recently, Raj grabbed Ana when helping her get dressed and pushed her down. He left marks on her arms. He also shoved food into Ana’s mouth because she was eating so slowly.

Is this abuse? Why or why not?
Robert is Mary’s second husband. Mary has Alzheimer’s and Robert takes care of her.

Robert never really liked Mary’s children or extended family. Robert has cut Mary off from her children, extended family, and friends. He does not allow anyone to come over to visit and does not pass Mary the phone when her children call. Robert does not take Mary out of the house.

Is this abuse? Why or why not?
Michael’s son, Erik, is his paid IHSS caregiver. Michael is in the mid stage of Alzheimer’s. He is unable to make phone calls, has a history of wandering and getting locked out of the house, and once left the stove on.

Erik says that he cares for his dad during the day, but he is working outside of the home. He is also taking Michael’s social security income and using it for his personal expenses.

Is this abuse? Why or why not?
Why Report Elder Abuse?

• It is the **LAW**. Failure to report, or impeding or inhibiting a report...is a misdemeanor, punishable by county jail, a fine, or both

• Helps connect families to support services

• Improves quality of life

• Can reduce hospitalizations

Welfare and Institutions Code Section 15630-15632
Reporting Driving

In California, physicians and surgeons are required to report a patient with Alzheimer’s disease and dementia to the local health officer, in writing. Reports must include the name of the patient, date of birth, and address.

Health and Safety Code Section 103900
Video: HBO: The Alzheimer’s Project

https://www.hbo.com/documentaries/the-alzheimers-project-caregivers

Running Time: 3 minutes 11 seconds

*Note: The video clip was manually extracted
Medication Management
“Time for your morning medication... and I understand you haven’t been eating very much.”
Overarching Principles/ Aims

• Minimize overall number of medications
• Minimize number of times in a day medications are given
• Identify best time(s) of day for member to take medications
• Monitor for effects, side effects, and adverse reactions
• Review medications regularly with the doctor
Alzheimer’s Considerations

- As disease progresses, cannot rely on person to take medications
- Caregiver needs to make sure medications are properly administered
- Do not leave person home alone with medications
- Lock up medications

*Keep medications out of reach; lock up for safety*
Alzheimer’s Considerations

• Sudden and unusual changes in cognition or behavior can be a sign of an adverse reaction
• Watch for medication reactions or interactions
• Refusing to take medications complicates medication management
Helping Caregivers Manage Medications

- Instruct families how to monitor for potential adverse effects
- Assess members’ and caregivers’ ability to adhere to medication regimen
- Simplify and use adherence aids
- Encourage caregivers to write down ALL questions to ask doctor/pharmacist; talk to doctor/pharmacist

B. Williams. The Ups and Dows of Psychotropic Meds in Older Adults.
Questions to Encourage Asking Doctor/Pharmacist

- Can pills be crushed?
- Can all pills be taken at the same time?
- Are herbal remedies safe to take?
- Will supplements interact with the medication?
- Other???
May's daughter puts her mom's pills in a pill box and then leaves them on the counter for her mom to take. May's daughter sets an alarm to remind her mom when to take her pills.

Sometimes, May's daughter returns home from work and finds a pill still in the pill box or finds a pill on the floor.

What would you suggest to May's daughter, given that she has to go to work?
Co-Existing Conditions
"I would go to the doctor, but I can't afford to take on any new conditions at this time."
People with Dementia Have Multiple Co-Existing Conditions

- 60% hypertension
- 26% coronary heart disease
- 25% stroke
- 23% diabetes

Bynum JP. Characteristics, Costs, and Health Service Use for Medicare Beneficiaries with a Dementia Diagnosis: Report 1. Dartmouth Institute for Health Policy and Clinical Care (2009).
Monitoring & Managing Co-Existing Conditions

- Loss of cognitive ability to understand multiple conditions and disease management
- Difficulty attending follow-up medical appointments/visits
- Less ability to express symptoms, leading to delays in seeking treatment
- Caregiver must learn techniques to manage co-existing conditions
Monitoring & Managing Co-Existing Conditions

• Consideration for **care and treatment preferences**
• How aggressive should treatments be? Will they cause distress? Will it be possible to adhere to instructions?
• How many medications will be prescribed? Will they be taken correctly?
• Should consideration be given to palliative care?
More Tests…What For?

Anonymous
August 12, 2014

“I would have done just about anything to prolong my grandma’s life; however, when you know someone has Alzheimer’s, you ask yourself if certain procedures are necessary anymore. My grandma resisted medical interventions when she was well, so I doubted she would have wanted a colonoscopy at mid-stage Alzheimer’s to see if she had colorectal cancer. Seriously, how would I, her caregiver, have even been able to get her to drink the Colyte? It’s hardly palatable when you know why you need to drink it. And the subsequent diarrhea? She could hardly wipe herself after regular bowel movements. It’s not like she had the cognitive ability to understand all of this nor did she have the functional ability to manage it. And, if she had been diagnosed with cancer, then what?”
A Dementia-Informed Lens

• **It’s not business as usual**
  - Need to think differently about how to manage care
  - Creative approaches may be needed
  - Special instructions may be needed
  - Caregivers may need additional training and support
# Managing Co-Existing Conditions with a Dementia-Informed Lens

<table>
<thead>
<tr>
<th>Congestive heart failure</th>
<th>Challenge of dementia</th>
<th>Potential adaptation strategies for caregiver</th>
</tr>
</thead>
</table>
| **Monitoring weight**    | Person refuses to go onto scale  
Person is unsteady when going onto scale | Try weighing person when he/she is more relaxed  
Make weighing an activity  
Grab bars near scale |
| **Taking diuretic**      | Cannot rely on patient to take medication  
More toileting needs; person unable to use bathroom independently  
Person is up at night | Caregiver administers medication  
Caregiver assists with toileting; consider toileting schedule  
Talk to doctor about taking medication in morning so person is not up at night |
| **Compression stockings**| Person refuses to wear stockings  
Person gets aggressive when caregiver tries to put on stockings | Elevate feet instead  
Speak to doctor about alternatives to compression stockings |
Managing Co-Existing Conditions with a Dementia-Informed Lens: Your Turn

In groups of 4-5, consider a co-existing condition that you work with patients to manage.

• How would dementia affect the management of this condition? Be specific.

• Consider how you would modify your disease management instructions given the dementia. What could be done differently? Be creative and realistic.
Safety
Safety Considerations

• Home safety
• Never leave person home alone
• Wandering
• Driving
Video: The Alzheimer's Caregiver - Janice Crenwelge on her Husband's Wandering

https://www.youtube.com/watch?v=wOAEJAtfTWU

Running Time: 1 minute 14 seconds
Medic Alert®

• 24-hour nationwide emergency response service
• Activates community support network to reunite family member/caregiver with the person who wandered
Assessing Home Environment

- Medications
- Hazards
- Weapons
- Fire
ALZHEIMER’S HOME SAFETY

INSTRUCTIONS: Imagine that you are working with a family caregiver to improve home safety for someone living with Alzheimer’s disease. Use the Home Safety Assessment to make recommendations to improve safety. Next to each picture, write your recommendations. Remember that this home safety assessment is specifically taking into consideration that the person has Alzheimer’s.

---

Home Safety Assessment

General Home Safety
- Do not leave care recipient home alone.
- Make sure car keys are well hidden.
- Weapons, such as firearms, should always be unloaded and put in a locked cabinet.
- Post emergency numbers on or near telephones.

Securing Exits & Entrances
- Doors leading to exits should be locked.
- Lock sliding glass doors (use a wooden dowel in the runner at the bottom of the door).
- Doors leading to unsafe areas (i.e. pool, garage, closets where dangerous items are stored) should be locked.
- Windows and balcony doors should be secured.
- For doors that lock from the inside, remove the lock or keep an emergency key in a nearby, secure location.
- Give a spare key to a trusted neighbor, family member, or friend for emergencies or store an extra key in a secure, hidden location.

Wandering
- Get identification bracelet for care recipient (Alzheimer’s Greater Los Angeles MedicAlert provides an identification bracelet and registry).

Fall/Trip Hazards
- Clear walkways and staircases from trip hazards like electrical cords, books, toys, and trash.
- Remove throw rugs to reduce the risk of falls or trips.
- Remove or secure furniture that rolls, falls over easily, or cannot support a person’s weight.
- Use nightlights in the bathroom, hallway, and bedroom.
- Increase brightness of lamps and fixtures.

Fire/Burn Hazards
- Have a working fire extinguisher.
- Install smoke detectors and carbon monoxide detectors.
- The thermostat on the hot water heater should be lowered to its lowest setting or no higher than 120 degrees Fahrenheit.
- Replace extension cords with surge protections.

Kitchen Safety
- Remove knives from the stove and oven or use knife covers to hide the knobs.
- Remove knives and scissors from counters and keep out of reach.
- Secure all cleaning supplies.
- Disable the garbage disposal and instant hot water.
- Unplug all electrical appliances when they are not being used.
- Products that can be eaten in excess and cause illness (i.e. sweeteners) should be placed out of reach.

Bathroom Safety
- Store medications, including vitamins and over-the-counter medications, in a locked cabinet or out of reach.
- Toxic products and products that can be eaten in excess and cause illness (i.e. toothpaste) should be placed out of reach.
- Remove razors and other sharp objects from counters and drawers; keep them out of reach.
- Use non-slip mats in the shower and tub.
- Install grab bars or safety rails in shower/tub.
- Install a toilet safety rail.
- Use a shower bench (for stability) in the shower/tub.
- Remove and hide personal electrical equipment such as hair dryers and curling irons.
Behavioral Symptoms
Remember...

Changes in the brain cause changes in how people communicate
Remember...

Neither the person nor the behavior is the problem – the problem is the need or feeling that the person is trying to communicate with the behavior.
Remember... Behavior IS communication
“If we spent as much time trying to understand behavior as we spend trying to manage or control it, we might discover that what lies behind it is a genuine attempt to communicate.”

Behavioral Symptoms

What behavioral symptoms have you encountered?

Behavioral expressions affect almost all individuals at some point of disease

Lykestsos, C.G. (2011) Alzheimers Dement 7; 532-539
Behavioral Symptoms Are NOT

• Not intentional
• Not trying to be difficult
• Not due to poor listening

REMIND FAMILIES... behaviors are not on purpose. Behaviors are part of the disease process.
Potential for Downward Spiral

Person with dementia has challenging behavior

- Increased caregiver stress/poor coping skills

- Decreased ability of caregiver to use behavioral strategies

- More challenging behaviors
Potential for Downward Spiral

- Decreased quality of life
- Increased functional decline
- Increased caregiver distress
- Increased healthcare utilization/hospitalizations and cost
- Earlier nursing home placement

Remember...When Someone Has Alzheimer’s...

The caregiver will need to figure out what is wrong or what is needed, based on the way the person is acting and thinking.
IDEA!

**Identify Behaviors**
- Identify problems

**Explore**
- Understand the causes/triggers
- Understand the meaning

**Adjust**
- Problem solve
Identify Behaviors/Problems

• What is the specific difficult/challenging behavior?
• Is it observable?
• Is it measurable?
• Can others see it?
• Is it something new and unusual?
Explore: Understand the Causes/Triggers

What is causing this behavior?

- Health issues
- Environmental issues
- Communication difficulty
- Psychological needs
- Task-related
How Do You Feel When...?
Remind families that when someone has Alzheimer’s disease, he/she may not be able to SAY that something is wrong, that he/she is not feeling well, or that he/she is in pain.
Explore: Understand the Health/Physical Triggers

- Too hot or cold
- Medical conditions
- Hungry / thirsty
- Medication-related
- Tired
- Pain

Alzheimer's LOS ANGELES
Explore: Understand the Health/Physical Triggers

1/3 of community dwelling older adults with dementia had undetected illness associated with behaviors.

Explore: Understand the Health/Physical Triggers

Caregivers need to be able to identify changes in baseline.

Any sudden and unusual change in cognitive state or behavior that is a rapid decline from baseline may be a sign that something is wrong.
Identification of Red Flag Behaviors

- Sudden incontinence
- Sudden disorientation to time and place
- Sudden sluggishness or agitation
- Sudden decreased attention
- New aggressiveness

Contact doctor if sudden and unusual changes are present.
Roger is a cheerful man who is very affectionate and has a high level of functioning. He is able to walk, go to the bathroom on his own, and eat meals that are prepared for him.
Understanding “Baseline”

One day, Roger wakes up and is disoriented. He seems really irritated; you can see a look of anger on his face. Roger lashes out at his wife. He is also suddenly incontinent.
Understanding “Baseline”

- Describe Roger’s baseline
- Is there a change in baseline?
- Is there cause for concern?
- What would you tell Roger’s wife to do?
Explore: Understand the Health/Physical Triggers

When people with Alzheimer’s have an undetected illness, they are:

- More likely to refuse care
- More likely to have significantly lower cognitive and functional status scores
- More likely to be hospitalized
- More likely to be prescribed psychotropic medications for their behaviors

Explore: Understand the Psycho-Social Triggers

- Socialization/interactions
- Emotional needs
  - Comfort
  - Security
  - Belonging
  - Purpose
  - Control
  - Fear
  - Boredom
Explore: Understand the Environmental Triggers

- Change in environment, routine, and/or staffing
- Clutter/crowding
- Noise
- Temperature
- Distractions
- Lighting
- Unfamiliar
UCLA Health: Hallucinations

https://www.uclahealth.org/dementia/hallucinations
or
https://www.youtube.com/watch?v=cpV57QGdU7I
Running time: 4 minutes 3 seconds
Is there anything in this picture that could be an environmental trigger?
How Would You Feel if...

• You were cold and did not have a way to tell someone you wanted a jacket?
• You were being forced to take a shower in a cold bathroom?
• You looked in the mirror, did not recognize yourself, and thought that there was a stranger in the room?
Explore: Understand the Task Triggers

- Too complicated
- Too many steps
- Unfamiliar
- Lack of structure
- Mismatch to cognitive level
- Boring/nothing to do
- Demeaning
Explore: Understand the Communication Triggers

- Is it hard for the person to understand?
- Is it hard for the person to speak?
- Is the person speaking a native language?
Explore: Understand the Meaning

- What does this behavior mean to the person exhibiting it?
- What is he/she trying to say?
- What does the behavior mean to the caregiver?
- Is this behavior distressing to the caregiver?

Consider: Who is this a “problem” for?
“I’ve learned that people will forget what you said, people will forget what you did, but people will never forget how you made them feel.”

- Maya Angelou
Case Example: “I Want My Mother!”

• What does it mean?
• What does “mother” mean?
• How does the person feel if you say: “But your mother died 10 years ago!”
• What would be a better response to teach the caregiver?
UCLA Video: Bathing

https://www.uclahealth.org/dementia/refusal-to-bathe or
https://www.youtube.com/watch?v=sI3Dc1kER
to

Running time: 4 minutes 28 seconds
Understanding the Meaning: Refusal to Bathe Video

In the video, several references are made to why the mother refuses to bathe. The reasons are associated with meaning. What does bathing mean to the mother?

How do the adaptations/strategies used by the daughter help address the meaning behind the refusal to bathe?

<table>
<thead>
<tr>
<th>Adaptation used by daughter</th>
<th>How adaptation addresses meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Daughter asks mom to help undress</td>
<td></td>
</tr>
<tr>
<td>Daughter asks mom to test the water temperature</td>
<td></td>
</tr>
<tr>
<td>Daughter asks mom to “wash”</td>
<td></td>
</tr>
</tbody>
</table>
Always pay attention to the person’s feelings

Strategies Not Solutions
Understand what can be changed
Set the tone
Stay calm
Do not demand
Try different things; no one size fits all
Adjust: Distraction and Redirection

• Offering the person something he/she likes to eat
• Watching TV or listen to music
• Asking the person for his/her help with a simple activity
• Leading the person to a different room
Adjust: Addressing Causes/Triggers

• Keep tasks and activities simple
• Break down tasks with step-by-step instructions
• Find meaningful, simple activities
• Keep the home as calm and quiet as possible
• Comfort the person
Adjust: Communication and Connection Strategies

Components that determine impact of communication:

- 55% Body language (postures, gestures, eye contact)
- 38% Tone of voice
- 7% Content or actual words

Adjust: Communication and Connection Strategies

Find new ways to communicate and connect

- Words
- Movement
- How we approach someone
- Facial expressions
- Tone of voice
- Touch
- Music
Culturally Appropriate Communication

- Use of silence
- Personal space
- Eye contact
- Cultural interpretations of social issues
- Cultural responses to emotions
- Non-verbal communication
Adjust: Compassionate Communication Strategies

DON’T

• Don’t argue
• Don’t reason
• Don’t confront
• Don’t remind them they forgot and question memory
• Don’t take it personally
• Don’t insist; try again later
Additional Compassionate Communication Strategies

**DO**

- Give short, one-sentence explanations
- Allow plenty of time for comprehension and response...and then triple the time
- Repeat instructions or sentences exactly the same way
Adjust: Compassionate Communication Strategies

**DO**

- Agree with them
- Accept the blame
- Leave the room, if necessary
- Respond to feelings rather than words
- Give yourself permission to alter the truth
Adjust: Compassionate Communication Strategies

**DO**

- Be patient and reassuring
- Go with the flow
- Use a gentle tone of voice
- Use gentle touch and remember importance of non-verbal communication
- Respect the person
Member: “What doctor’s appointment? There’s nothing wrong with me.”

Don’t: (reason) “You’ve been seeing the doctor every three months for the last two years. It’s written on the calendar and I told you about it yesterday.”

Do: (short explanation) “It’s just a regular checkup.”

(accept blame) “I’m sorry if I forgot to tell you.”
DON'T ARGUE

Member: “I didn’t write this check; someone is forging my signature.”

Don't: (argue) “What? Don’t be silly! No one is forging your signature.”

Do: (respond to feeling) “That’s a scary thought.”

(reassure) “I’ll make sure no one does that.”

(distract) “Would you help me fold the towels?”
DON’T CONFRONT

**Member**: “Nobody’s going to make decisions for me. You can go now...and don’t come back!”

**Don’t**: (confront) “I’m not going anywhere; mom, you can’t remember enough to make your own decisions.”

**Do**: (accept blame or respond to feeling) “I’m sorry this is so tough.”

(assure) “I love you and we’ll get through this together.”
Member: “Who are you? Where’s my husband?”

Don’t: (take it personally) “What do you mean—who’s your husband? I am!”

Do: (go with the flow and reassure) “He’ll be here for dinner.”

(reassure) “How about some chocolate chip cookies?”
DON'T REMIND THEM THEY FORGOT AND QUESTION MEMORY

**Member:** “Joe hasn’t called for a long time. I hope he’s okay.”

**Don’t:** (remind and question memory)
“Mom, Joe called yesterday and you talked to him for 10 minutes. Don’t you remember?”

**Do:** (reassure) “You really like talking to Joe.”

**Distract** “Let’s call Joe when we get back from our walk.”
IDEA!

**ID**entify Behaviors
- Identify problems

**E**xplore
- Understand the causes/triggers
- Understand the meaning

**A**djust
- Problem solve
UCLA Health: Wandering

https://www.uclahealth.org/dementia/wandering
or
https://www.youtube.com/watch?v=Sw0yEB508mI
Running time: 4 minutes 5 seconds
Applying IDEA!

APPLYING IDEA! TO WANDERING

IDENTIFY THE BEHAVIOR
- What was the challenging behavior?

EXPLORE
- What were the causes/triggers?
- What did this mean to the father?

ADJUST
- What adaptations match the causes/triggers and/or meaning?
IDEA!

**Identify Behaviors**
- Wandering

**Explore**
- Causes/triggers: keys, coat
- Meaning: wants to go home/kids need him

**Adjust**
- Approach calmly; provide reassurance and comfort; find a meaningful activity
- Remove keys and coat
Remember…

• Validate concerns and frustrations of families
• If families are not speaking to you about challenging behaviors, may need to ask different questions
• Learn from experiences of families
Remember...

- Share IDEA! with families
- Help families work through challenging behaviors, using IDEA!
- Apply cultural lens to IDEA! to increase effectiveness
- Send families Caregiver Tip Sheets
Caregiver Tip Sheets free to download:
www.alzheimersla.org/professionals
"It sort of makes you stop and think, doesn't it."
Case Scenario: Using IDEA!

Juanita tells you that her father often gets anxious in the afternoon. Her dad paces through the house, following Juanita around, and says over and over again that he is looking for his daughter.

He says that it is time for her to be home from school.

Juanita gets annoyed with her dad. The repeated questioning bothers Juanita, and the following her around makes it difficult for her to prepare dinner.
Medications for Behavioral Symptoms
Remember...

- Behavior is a way of communicating
- Medications may limit a person’s ability to express what he/she needs
- Providers may over-rely on medications
Remember…

There are no FDA-approved pharmacotherapies for behaviors
Medications for Behavioral Symptoms

- Rule out medical problems first
- Use non-pharmacological approaches first
- Use medications very carefully
- Medications most effective when combined with non-drug approaches
Medications for Behavioral Symptoms

When to consider medications?
• Non-drug approaches fail after being consistently applied
• Severe symptoms
• Potential harm to self or others
Medications for Behavioral Symptoms

Antipsychotics

• Moderate effects at best
• Benefits need to be balanced against adverse events, including mortality
• Black box warning
Antipsychotic drugs aren't necessary in the vast majority of dementia cases, gerontologists say. The pills can be stupefying and greatly raise the risk of falls — and hip fracture.

It turned out Beatrice DeLeon was given Risperdal and Seroquel, which are approved to treat bipolar disorder and schizophrenia. But professor Bradley Williams, who teaches pharmacy and gerontology at the University of Southern California, says antipsychotics should only be used as a last resort, and just for a month or so, before gradually being eliminated.
Antipsychotic Use in Community-Dwelling Older Adults with Dementia

• Not just a problem in nursing homes

• Less information known about antipsychotics used outside of nursing homes, but overuse occurring

Medications for Behavioral Symptoms

• Avoid antipsychotics as first line of treatment

• Use IDEA!
What are We Tackling Today?

- Role of Family Caregivers
- Diverse Perspectives on “Caregiving”
- Family Caregiver Identification
- Family Caregiver Assessment
- Supporting Caregivers
- Making Referrals
  - Alzheimer’s Los Angeles
Role of Family Caregivers
16 million UNPAID caregivers
What Do Caregivers Do?

In groups of 5-6, write down all of the things that caregivers do. Which group will come up with the most???
What Do Caregivers Do?

- Manage co-existing conditions/treatment
- Medication management
- Recognize acute medical conditions/ issues
- Wound care
- Manage behavioral symptoms
- Appointments
- Transportation
What Do Caregivers Do?

- Hygiene
- Meals
- Housekeeping
- Home safety
- Finances
- Decision-making
- Supervision
- Socialization
18.4 billion hours of unpaid care
Caregivers are our key to keeping members at home.
AND YET...

Caregivers are largely unidentified by health plans and healthcare providers
AND YET…

Caregivers of Alzheimer’s members have high rates of stress, burnout, and depression.
Importance of Caregivers

- Caregivers are our eyes, ears, and hands
- Integration of caregivers into care planning and care coordination processes
- Successes/failures rest disproportionately on caregivers
Unique Caregiver Considerations

• Caregiving is more demanding as disease progresses
• Caregivers need to learn whole new language (behavior & communication)
• Person with dementia cannot change (only caregiver can adapt)
• Role changes may occur
Diverse Perspectives on “Caregiving”
Caregiving in Diverse Communities

- Among people 70+, 44% of Latinos, 34% of blacks, and 25% of whites received home-based family caregiving.
- Ethnic minority caregivers provide more care than white caregivers.

Caregiving in Diverse Communities

- **African American** caregivers report less stress and depression than white caregivers, and greater rewards.

- **Hispanic** and **Asian American** caregivers are more depressed than white caregivers.

- **Asian American** caregivers use fewer professional support services than white caregivers.

Caregiving in Diverse Communities

- **Whites** most likely to receive help from spouses
- **Hispanics** most likely to receive help from adult children
- **African Americans** most likely to receive help from non-family members

Caregiving and the LGBT Community

- 1/3 older people who are LGBT live alone (compared to 1/5 people who are non-LGBT)
- 40% of older people who are LGBT say their support network has become smaller over time
- African American LGBT adults are 3x as likely as white or Hispanic LGBT adults to say people from church/faith community are part of support system

Caregiving

- Caregiving = family responsibility
- Filial roles/responsibilities
- Normal expectation
- Inherited responsibility
- Honor
- Duty
Case Study

Mei:
It is an honor for me to care for my mother. Being a caregiver upholds my family’s dignity. A daughter is meant to care for her mother as she ages and gets sick.
Caregiving

- Consider family dynamics
- Role of extended family
- Caregiver vs. decision-making
Case Study

Brianna's family is her primary support system. She also has a neighbor who she calls her daughter.

Brianna's church community provides a lot of support.
LGBT Considerations and Caregiving

- Who is “immediate family?”
- Role of friends and partners who are not legally recognized to make decisions
- Lack of family caregivers
- Importance of using the person’s preferred language (pronouns and how relationships are defined)
Remember...

- What pronoun does the person use, irrespective of what is in the chart? He? She? They?
- When the person is defining his/her/their relationship, do they use the term “friend,” “partner,” “spouse,” “roommate”? 

Professionals should use the preferred language of their members.
Case Study

David and James have been living as partners for 30 years. They are not legally married. David’s family has never fully accepted James. As David’s dementia progresses, James assumes a greater caregiving role.

Will David’s family recognize James as the decision maker?
Caregiving

• Unwilling to ask for help
• Not wanting to “burden” others
• Self-sacrifice & health impact
• Financial strain felt more deeply in some communities
Potentially Resulting In...

- Caregivers not planning ahead for their own needs & well-being
- Increased caregiver stress, depression, fatigue, burnout
- Crises
Remember…

- Cultural values and beliefs are related to providing care
- Honor and duty to take care of a loved one
- “A heavy job done with love”
- Modeled behavior in some families
- For some, it is a burden
Family Caregiver Identification
Caregiver Identification

“Caregiver”

• Words can be lost in translation
• Words can be offensive
• Words may not capture meaning
Caregiver Identification

Family Dynamics

• Hands on caregiving vs. decision-making
• Consensus-based
• Fictive-kin
Caregiver Identification

• Identify person who might help you most when you need it
• May be many people
• Many hats being worn
Who is the caregiver in this family?
Caregiver Identification

Who lives with the member with dementia?
Caregiver Identification

Who is most likely to help when the most help is needed?
Caregiver Identification

Who makes decisions in this family?
Tools for Identifying an Informal or Family Caregiver

Note to care manager: An informal or family caregiver is likely to be the person, or persons, who provide the most help when needed. Keep in mind that not all people identify with the term “caregiver,” ask families what terminology they prefer using. It is also important to identify the person who is recognized to make care decisions on behalf of the member, often referred to as the authorized representative.

The questions/prompts below will help you identify the member’s authorized representative and/or the person(s) assisting with the most hands-on care. Questions/prompts are not all-inclusive, but serve to facilitate conversation.

(1) Identify the authorized representative

- Name: ___________________________ Relationship: ___________________________
- Contact Information: ___________________________

(2) Does someone live with the member? ___________________________
- If so, name and relationship: ___________________________

(3) If the member lives alone, how often does someone visit the home (if at all)? ___________________________
- Who is most likely to visit the member? Name and relationship: ___________________________

If questions below are asked directly to the member, consider saying, “If you needed help with any of the following, who would you ask?”

<table>
<thead>
<tr>
<th>Type of assistance provided</th>
<th>Name and relationship of person who provides assistance</th>
<th>No assistance provided</th>
</tr>
</thead>
<tbody>
<tr>
<td>(4a) ADL assistance (e.g., bathing, dressing, toileting, eating/feeding)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>(4b) IADL assistance (e.g., meals, housekeeping, laundry, telephone, shopping, finances)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>(4c) Medication administration (e.g., oral, inhaled, or injectable)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>(4d) Medical procedures/treatments (e.g., changing wound dressing)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>(4e) Supervision and safety</td>
<td></td>
<td></td>
</tr>
<tr>
<td>(4f) Coordination of medical care (e.g., scheduling medical appointments, transportation)</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Based on your conversation, identify the person who provides the most hands-on care:

- Name: ___________________________
- Relationship to member: ___________________________
- Contact information: ___________________________

(Adapted from Centers for Medicare and Medicaid Services “Care Tool: Acute Care,” 2008)

*Definition of informal family caregiver adapted from United Hospital Fund “Next Steps in Care: Assessing Family Caregivers,” 2013.

© 2016 Alzheimer’s Greater Los Angeles
Caregiver Identification

• Use guiding questions/prompts
• Facilitate a discussion around the questions
• Remember that some people will not admit to needing help. Try saying, “If you needed help with any of the following, who would you ask?”
Role Play: Caregiver Identification

Tony has diabetes, high cholesterol, and early/mid stage Alzheimer’s. In general, you feel that you are able to get fairly reliable information from Tony. Though Tony previously managed his own medical care, several recent hospitalizations and missed medical appointments concern you.
Role Play: Caregiver Identification

Based on Tony’s medical history and your conversations with him, you know that Tony needs assistance with several IADLs and may be struggling with ADLs. Tony does not like to admit needing help, but he has mentioned to you a “lady friend” that he spends time with. You do not know about Tony’s family.
Role Play: Caregiver Identification

Facilitate a conversation with Tony to identify who is assisting with his care. Use the Tool for Identifying an Informal or Family Caregiver to facilitate this conversation. Remember to be careful about the language you use in this conversation, as you want to be respectful and continue building rapport.
Family Caregiver Assessment
“Nobody ever asks ‘How’s Waldo?’”
Importance of Caregiver Assessment

Why assess?

- Stress, fatigue, burnout, depression
- Inability to maintain care at home
- Hospitalization/nursing home placement
Importance of Caregiver Assessment

Areas of concern may include:

- Social isolation
- Capacity to provide care
- Anxiety
- Physical/emotional strain
- Need for informal support
- Depression

What is the Toll on Caregivers?

• Depression
• Fatigue
• Burnout
• Emotional stress
Physical and emotional “burden” of ADRD caregiving costs $9.3 billion in additional health care for caregivers.

~60% of ADRD caregivers rate emotional stress as high or very high.

More than 1/3 report symptoms of depression.

Alzheimer’s Association, Alzheimer’s Disease Facts and Figures 2014
Case Study

Janice is the primary caregiver for her husband. Janice rarely leaves the house because her husband needs around-the-clock supervision. His behaviors have become challenging and embarrassing so it is easier to stay home than to go out. Janice rarely has friends over anymore. She is tired and exhausted. She feels trapped.
HBO: The Alzheimer’s Project

https://www.hbo.com/documentaries/the-alzheimers-project-caregivers

Running time: 2 minutes 38 seconds

*Note: The video clip was manually extracted
Things to Look For

10 warning signs:

1) Denial
2) Anger
3) Social withdrawal
4) Anxiety
5) Depression
6) Exhaustion
7) Sleeplessness
8) Irritability
9) Lack of concentration
10) Health problems
Able to care for someone?

Caregiver Isolation, Anxiety, Depression
Caregiver Functional/Health Limitations

Impact on:
- Lifting?
- Bathing?
- Walking?
- Other?
Why is assessment so important?

- Not all caregivers will ask for help
- Many caregivers will only ask for help once they are exhausted, burned out, and already stressed
- Helps professionals identify areas of need so supports can be put in place
- Helps professionals link caregivers to necessary services
Identifying Needs/Areas of Concern

- Puts a name to areas of concern
- Narrows down family needs
- Allows DCS to work with caregiver to determine next steps
**CARE NEEDS ASSESSMENT TOOL**

**CHALLENGING BEHAVIORS**

<table>

*Care managers should use clinical judgment to gauge caregiver’s capacity to provide care, level of burden to caregiver, and identified unmet needs. This information will determine which standard care plans are needed.

Other needs identified:
The following questions are about you, the caregiver, as they relate to providing care to the care recipient (CR). The following items refer to how a caregiver feels and behaves as a result of providing care. There are no right or wrong answers.

### Caregiver Mastery
During the past 4 weeks, because of helping [CR] would you say that you were:

<table>
<thead>
<tr>
<th>Item</th>
<th>Strongly agree</th>
<th>Agree</th>
<th>Disagree</th>
<th>Strongly disagree</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. unsure whether he or she was getting proper care.</td>
<td>3</td>
<td>2</td>
<td>1</td>
<td>0</td>
</tr>
<tr>
<td>2. uncertain about how to best care for him/her.</td>
<td>3</td>
<td>2</td>
<td>1</td>
<td>0</td>
</tr>
<tr>
<td>3. that you should be doing more for him/her.</td>
<td>3</td>
<td>2</td>
<td>1</td>
<td>0</td>
</tr>
<tr>
<td>4. that you could do a better job of caring for him/her.</td>
<td>3</td>
<td>2</td>
<td>1</td>
<td>0</td>
</tr>
</tbody>
</table>

**Score** (Sum of items 1–4)

### Relationship Strain
During the past 4 weeks, because of helping [CR] would you say:

<table>
<thead>
<tr>
<th>Item</th>
<th>Strongly agree</th>
<th>Agree</th>
<th>Disagree</th>
<th>Strongly disagree</th>
</tr>
</thead>
<tbody>
<tr>
<td>5. that he/she tried to manipulate you.</td>
<td>3</td>
<td>2</td>
<td>1</td>
<td>0</td>
</tr>
<tr>
<td>6. that your relationship with him/her was strained.</td>
<td>3</td>
<td>2</td>
<td>1</td>
<td>0</td>
</tr>
<tr>
<td>7. that he/she made requests over and above what he/she needed.</td>
<td>3</td>
<td>2</td>
<td>1</td>
<td>0</td>
</tr>
<tr>
<td>8. that you were resentful toward him/her.</td>
<td>3</td>
<td>2</td>
<td>1</td>
<td>0</td>
</tr>
<tr>
<td>9. that you were angry toward him/her.</td>
<td>3</td>
<td>2</td>
<td>1</td>
<td>0</td>
</tr>
</tbody>
</table>

**Score** (Sum of items 5–9)

### Health Strain
During the past 4 weeks, because of helping [CR] would you say that:

<table>
<thead>
<tr>
<th>Item</th>
<th>Strongly agree</th>
<th>Agree</th>
<th>Disagree</th>
<th>Strongly disagree</th>
</tr>
</thead>
<tbody>
<tr>
<td>10. your physical health was worse than before.</td>
<td>3</td>
<td>2</td>
<td>1</td>
<td>0</td>
</tr>
<tr>
<td>11. you felt downhearted, blue, or sad more often.</td>
<td>3</td>
<td>2</td>
<td>1</td>
<td>0</td>
</tr>
<tr>
<td>12. you were more nervous or bothered by nerves than before.</td>
<td>3</td>
<td>2</td>
<td>1</td>
<td>0</td>
</tr>
<tr>
<td>13. you had less pep or energy.</td>
<td>3</td>
<td>2</td>
<td>1</td>
<td>0</td>
</tr>
<tr>
<td>14. you were bothered more by aches and pains</td>
<td>3</td>
<td>2</td>
<td>1</td>
<td>0</td>
</tr>
</tbody>
</table>

**Score** (Sum of items 10–14)
Using a Caregiver Needs Assessment: Marina and Marco

1) Read the scenario
2) Use the Care Needs Assessment Tool and the Benjamin Rose Institute Caregiver Strain Instrument to better assess needs
3) Prioritize needs
4) Determine next steps
Supporting Caregivers
Importance of Support

Gina H.

Gina is a caregiver for her 88-year-old father, Joel, and was also caring for her mother until she passed away last month at the age of 90.

Joel was diagnosed nine years ago with Alzheimer’s. Initially it began with signs of confusion, forgetfulness, hallucinations, and wandering; he even got lost numerous times. Joel is now in the middle stages of the disease and he suffers from several health ailments.

Gina’s mother had Leukemia and suffered from severe arthritis that caused her to be bed-bound. Gina had to take her mother to weekly chemotherapy treatments which was challenging because she could not leave her father unattended. Juggling multiple medical appointments was incredibly difficult.

Because of her parents limited mobility, Gina had to carry and transfer her parents from bed to chair. She did not have any assistive equipment to help with this. On the days that her parents had medical appointments, Gina had to carry her parents up and down the stairs because the landlord did not allow home modifications. Gina’s physical health has deteriorated due to the heavy lifting and carrying, as well as lack of rest.

Gina’s emotional health has also been impacted. Her family has only been able to provide limited support, and the challenges encountered by the family have been exacerbated by living on a fixed income. Although Gina’s mother is no longer around, her father must still be supervised 24/7.

How We Helped

Alzheimer’s LA helped provide emergency respite funds so that Gina could accompany her mother to the chemotherapy sessions and ensure that her dad was safely being supervised. One of our Care Counselors provided Gina with education on how to navigate the health care system. We even showed Gina how to obtain a wheelchair and bath chair for her father through his health insurance. This not only eases the physical demands of caregiving, it also provides her father with increased mobility.

Despite Gina’s exhaustion, pain, and grief over her mother’s death, she remains strong-willed. She continues to provide the best possible care for her father.
Why Use Best Practice Care Plans?

- Reduces variability in care management practices
- Improves care management
- Provides framework to address needs
How to Use Best Practice Care Plans

• Ideas for how to proceed
• Cues for care manager
• Action items that caregiver can choose to use
• Choices = greater control
• Collaborative
• Not prescriptive
Family-Centered Best Practice Care Plans

Use family-centered lens to ensure that care accounts for:

- culture
- values
- preferences
- language
- literacy level, and
- decision-making processes
Family-Centered Best Practice Care Plans

- Activities member enjoys
- Cultural and linguistic considerations
- Family roles/responsibilities
- Social support systems
Best Practice Care Plans Problem Areas

Challenging Behaviors

- Sleep Disturbances
- Repetition
- Sadness and/or Depression
- Combativeness
- Hallucinations
- Sundowning
- Suspiciousness and Paranoia
- Screaming and Making Noises
- Disinhibition
Best Practice Care Plans Problem Areas

Activities of Daily Living and Functional Needs

• Resists Bathing or Showering
• Difficulty with Dressing and Grooming
• Difficulty with Eating
• Difficulty Using the Toilet/Incontinence
Best Practice Care Plans Problem Areas

Safety

- Home Safety Concerns
- Insists on Driving
- Takes Medicine the Wrong Way
- Wanders/Gets Lost
Best Practice Care Plans Problem Areas

Caregiver Needs

- Caregiver Depression/Stress
- Difficulty Providing Care Because of Your Health
- Lacks Understanding of Dementia
- Legal and Financial Planning
- Long-Term Care Planning
- End-of-Life Planning
Components of Best Practice Care Plans

- **Identify** the problem, goal, expected outcome
- Assess further
- **Explore** triggers and meaning
- Provide problem-solving strategies (**Adjustments/adaptations**)
- Clinical support needs
- Caregiver support and community resources
- Follow-up
Working With Marina

Look at Marina’s Care Needs Assessment and Benjamin Rose Institute Caregiver Strain Instrument. What care plans do you want to consider using? Remember that you would need to determine mutually acceptable goals and not overwhelm Marina.
Working With Marina

Now, develop a care plan for Marina (in the format you use) that addresses at least one of her dementia/caregiving-specific needs.
Given everything we have discussed, why are referrals to home and community-based services so important in dementia care management?
Better Outcomes

- Ensure social determinants of health are met
- Reduce caregiver stress and burnout
- Improve quality of life

- **Reduce hospitalizations/readmissions**
- **Prevent/delay institutionalization**
Considerations Before Making a Referral

- Clarify service need
- Be specific
- Carefully match caregiver to agency (consider language, cost, geography, culture)
- Be proactive and anticipatory
- Go the extra mile for families; high touch

Why ALZ Direct Connect?

- Free
- Provides psycho-social-educational support
- Improves care coordination
- Connects families to resources before a crisis
- Provider receives feedback

**HELPS**
- patients & families understand Alzheimer's & other dementias

**CONNECTS**
- patients & caregivers to resources & education

**IMPROVES**
- Care coordination & builds supportive networks
ALZ Direct Connect Referral Program

ALZ Direct Connect Referral Program

Partnering with healthcare and aging service providers to improve care and support for people with Alzheimer’s or dementia & their families

ALZ DIRECT CONNECT allows healthcare and aging service providers to directly link patients/carers and families to Alzheimer’s Los Angeles for:

- access to care coordination & psychosocial support
- referrals to supportive services
- help with understanding the disease & navigating its progression
- a 360 approach to care through feedback to the referring provider

Video: A Lonely Journey

https://www.youtube.com/watch?v=4tFjcMeYDFg

Running Time 1 minute 52 seconds
Mr. Lin is an 86-year-old man with midstage Alzheimer’s disease and type 2 diabetes. Mr. Lin lives with his 83-year-old wife who is his primary caregiver. Mr. Lin and Mrs. Lin have been married for 50 years and used to enjoy dancing, singing, and going to church. They have two children who live nearby. Mrs. Lin’s has her own health issues, including arthritis and osteoporosis.

Mr. and Mrs. Lin are on a fixed income and have Medi-Cal. The Lins struggle with paying rent and sometimes do not have enough food to eat.

Mrs. Lin often gets impatient with her husband and yells at him when he is too slow in eating or puts on his clothes incorrectly. She also gets angry when he refuses to take his medications. She doesn’t understand that this due to the Alzheimer’s disease. Mrs. Lin also gets frustrated when her husband follows her around the house. Mr. Lin frequently misplaces things, like his bible, and accuses his wife of...
