

The Mary S. Easton Center for Alzheimer's Disease Research at UCLA

The Mary S. Easton Center for Alzheimer's Disease Research at UCLA (UCLA-Easton Center) is a comprehensive research center focused on Alzheimer's disease (AD) and other dementias.

Our Mission is to:

- Improve the quality of life for patients and caregivers
- Develop new medications and treatments for Alzheimer's disease and related conditions
- Support research to better understand Alzheimer's disease and related conditions

UCLA Neurology Dementia and Memory Disorders Clinic

UCLA Memory Disorders Clinic specializes in the evaluation and diagnosis of Mild Cognitive Impairment, early Alzheimer's disease, frontotemporal dementia, and related disorders. An early diagnosis enables patients to take advantage of the most effective therapies and to maintain the highest level of functioning for the longest period of time.

Clinical Trials

Clinical trials are studies that test new medications in people. Doctors use clinical trials to discover new treatments for diseases. New treatments are possible only through the voluntarily participation of patients and family members. Research and Clinical Trials opportunities may be available.

Research

The focus of the Mary S. Easton Center for Alzheimer's Disease Research at UCLA is to understand more about Alzheimer's and provide a better treatment of the disease.
